## CAMPUS PLANNING CONSULTATION PROCESS

Adequate time: It takes time to prepare information for consultation, just as it takes time

#### 4.0 TheProject Initiation Report

Basic information about each planning initiative will be communicated to planning committee members and key stakeholders through a *Project Initiation Rep* bris report will:

- identify the purpose of the project
- identify key poject issues
- outline the expected outcomes and deliverables (what will be addressed; what will be produced)
- include the anticipated project timelines known)
- identify the key decision points and approval requirements
- include a site map.

|   |                   | Project Initiation Report   |                              |
|---|-------------------|---|------------------------------|
|   | Topic             | Questions   | Comments                     |
| 1 | Project Rationale | What is the project?  | Indicate                     |
|   |                   | Why is it needed?   | linkages to                  |
|   |                   | What issue(s) should it address?  | Strategic Plan               |
|   |                   | What problem should it solve?   | & Campus<br>Plan             |
|   |                   |   |                              |
| 2 | Issue Assessment  | Which issues will require stakeholder input?  | Include                      |
|   |                   | Which issues are likely to have external impacts? (off-site and off-campus)                                 | explanation of<br>Ministry & |
|   |                   | What decisions have already been made?  | municipal                    |
|   |                   | What decisions are dictated by other jurisdictions or required through existing legislation or regulations? | requirements                 |

### 4.1 The Project Consultation Plan

It is recommended that project consultation plan be prepared frozijor planning initiatives. This document can be sed to inform the CPC and FDSS about the project and enable members to make informed decisions about what type of consultation process is needed and appropriate for each undertaking. The plan will vary for each project and the nature and extent of input required through the planning process.

| Proj | Project Consultation Plan   |   |  |  |  |  |  |
|------|-----------------------------|---|--|--|--|--|--|
| 1.   | Project Description         | Identify key information & messages to be included in subsequent communications | Include information from the project initiation report |  |  |  |  |
| 2    | Stakeholder Identification* | Who may be directly impacted or affected by the plan/project?                   | Develop data<br>base                                   |  |  |  |  |

#### 5.0 Consultation Approaches

The following chapter identifies different models of consultation for different types of projects, where they differ in scope, complexity and intellesel. Theseapproaches are not mutually exclusive; often a planning initiative will incorporate elements of each model. A consultation process must reflect the fact that not all people desire the same level of participation, or can afford the time required. A comprensive planning process should include many options for people to obtain information, consider options, and supply input.

#### 6.1 Information Model

This model is intended for two types of situations to provide updates to government bodies, service providers, funding agencies and the like, who have an interest in the University's sdehe nivTw [(r)b( i)-5(npu -4(or)-4(m1(ppl)no17(e)-2o ha)-2(v)d4(e)-2(qui)6(rc)7(e)-2(2(u)11(ppl)-5(r))5(

#### 7.0 Consultation Tool Kit

There are a number of tools, techniques and models for consultation. More detailed information on the various techniques, including their advantages and disadvantages will be developed in more detail for the next meeting of the Campus Planning Committee.

| TECHNIQUE | BENEFITS | CAUTIONS |
|-----------|----------|----------|

| TECHNIQUE  | BENEFITS   | CAUTIONS  |
|--|--|---|
|  |  |   |
| Community Briefings Use regular meetings of  | Provides opportunity to obtain information from larger community.        | Community associations are not always representative of the larger community.               |
| community associations,  | ,  | ·   |
| business improvement areas,<br>neighbourhood associations,<br>and the like, to share<br>information and obtain | Provides information on how the university is viewed externally          | Can become a forum for airing past grievances, rather than contributing constructive input. |
| feedback on planning   | Opportunity to expand  |   |
| concerns   | stakeholder list   |   |
|  |  |   |
|  | Can build community goodwill   |   |
| Web-based Surveys and<br>Feedback Forms  | Provides input from individuals who would be unlikely to attend meetings | Generally, not statistically valid results  |
|  | Provides input from cross-<br>section of campus community:               | Hard to control geographic reach of the survey  |
|  | extends beyond the "usual suspects"                                      | Results can be easily skewd.  |
|  | Higher response rate than other communication forms                      |   |

#### 8.0 Sample Land-Use & Master Planning Process

#### Strategic PlanningApproach

The strategic planning approach is visition, utilizes a comprehensive environmental scan and SWOT analysis, and includes implementation actions. While designed for business applications, the process is often applied to laude plans and nater planning exercises.

SWOT stands for strengths, weakness, opportunities and strengths. Strengths and weaknesses are *internal factors*: these are the characteristics of an organization that the organization has some control over and can influence through policy, investment strategies, marketing efforts, HR development, and the like. Opportunities and threats are *external factor*these are conditions that affect and/or are imposed on an organization. External conditions may include: demographics (e.g pool of potential students), government policy and regulations, public policy (e.g. immigration policy affecting foreign students, type and availability of research grants, university funding priorities), fiscal policy, competition from other organizations, etc.

A land-use planning process can incorporate a strategic planning approach at two levels: First, it may be guided by the organization's strategic plan and will provide the spatial manifestation of the organization's vision and key strategies. Fluniversity's campus plan is informed by its strategic plan, *A Vision for the*

The associated planning process may be structured as follows:

# Identify Key Stakeholders - Develop data

base of contacts

#### 8.0 SUMMARY

Comprehensive planning is complex, involves many stakeholders, uses many resources, involves discussion regarding potentially divisive issues, and may take place over several years. The key to making the consultation component effective and managealtdeclarify expectations and be upfront about constraints very early in the process.

Consultation processes can be vastly improved by simply removing barriers and improving access to information. Only a few planning initiatives warrant extensive collative processes, but all of them demand the timely sharing of information to those affected by the University's decisions.
