

MICR200A
Introductory Microbiology I
Fall 2014
CRN 12294

Class time/location: Mon, Thurs, 8:30 – 9:50, Engineering and Computer Sciences, ECS 123

Instructors: Dr. Doug Briant

office: Petch 227

email: dbriant@uvic.ca

office hours: Monday, Thursday 11:00 – 12:00 pm

** available at other times by appointment **

Dr. Chris Upton

office: Petch 213

email: cupton@uvic.ca

office hours: by appointment

Textbook: Prescott's Microbiology (9th Edition), J.M. Willey, L.M. Sherwood and C.J. Woolverton, 2014, McGraw-Hill.

i>clickers: students will require **their own** i>clicker for in class participation marks in both the lecture and laboratory components. i>clickers are available in the bookstore

Laboratory: Laboratory manuals are available in the bookstore

Note: Laboratory classes start during the week of September 8th. Laboratory attendance is mandatory, and a passing mark in the laboratory portion is required in order to obtain credit for the course

Lecture Notes: Notes will generally be made available on the course Moodle site prior to lectures. Notes are arranged by topic, and a single topic may span multiple lectures. **Lecture notes are not complete**, and students will be responsible for all materials covered in the lectures.

Video Lectures / Tutorials: Several lectures will be delivered in video format on the course Moodle site. It will be your responsibility to watch these prior to the scheduled class. Scheduled class time for these lectures will be used as a tutorial session with a question/answer period, sample problems and a participation-only quiz

MICR200A LEARNING OBJECTIVES

- Students will gain insight into historical events that initially identified microbes. Processes used to establish the role of microbes in important processes such as disease will also be examined and students will be able to compare these methods to modern techniques utilized in the field of microbiology.
- The major structural components of bacteria, archae and eukaryotes will be described. Utilizing this information, students will be able to compare the structures between these organisms, and rationalize why they have evolved specific adaptations.
- Conditions for growth of microbes, both in natural and laboratory settings will be examined. Students will demonstrate the ability to apply this knowledge to both identify and classify microbes. Additionally, students will learn to categorize microbes based on a variety of phenotypic and genotypic traits.
- Metabolic pathways will be described in the context of microbes, and compared to more complex systems, particularly humans. The suitability of using bacteria as a model organism for higher order eukaryotic organisms will be appraised.
- Students should be able to describe the basics of virion structure, virus replication, viral gene regulation and the difficulties of making anti-viral drugs and vaccines for example viruses such as polio, flu, HIV and phage.
- The laboratory component of the course will introduce basic microbiology techniques. By completion of the course, students will be capable of performing aseptic technique, as well as isolating, visualizing and identifying microbes.

Tentative Class Schedule:

<i>topic</i>	<i>instructor</i>	<i>dates</i>	<i>textbook chapters</i>
1) Introduction -history -visualization -structure			

Important dates and evaluation:

EVALUATION	Date
15% midterm exam 1	<i>in class</i> Thursday, September 25
20% midterm exam 2	<i>in class</i> Monday, October 27
22% final exam	<i>2 hours, set by registrar</i>
40% laboratory	<i>based on laboratory components (reports, quizzes, laboratory exam etc.). See lab manual for grading details</i>
3% lecture participation (requires i>clicker)	<i>80% class participation, 3%</i> <i>70% class participation, 2%</i> <i>60% class participation, 1%</i> <i><60% class participation, 0%</i> <i>* participation is measured by response to i>clicker questions in lecture</i>

- Students are responsible for ensuring that they are properly registered in the course.
- Students are expected to have met all pre/co-requisites for the course (see above).

Conversion of marks to final letter grades:

The total mark, calculated from the marks on all of the exams according to the weighting scheme above, will be converted to a percentage and then to a letter grade in the following way:

A⁺ 90 -100 **B⁺** 77 - 79 **C⁺** 65 - 69 **F** < 50

ENT INFORMATION AND POLICIES

1. The Department of Biochemistry and Microbiology upholds and enforces the University's policies on plagiarism and cheating. These policies are described in the current University Calendar. All students are advised to read this section.
2. Cell phones, computers and other electronic devices must be turned off at all times unless being used for a purpose relevant to the class. Students having a cell phone, tablet, or computer on their person during an exam will be assumed to have it for the purpose of cheating.
3. Any recordings of lectures may only be performed with written permission of the instructor, and are for personal use only. The instructor retains copyright to such recordings and all lecture materials provided for the class (electronic and otherwise); these materials must not be shared or reposted on the Internet.
4. Students are expected to be present for the midterm and final exams. Instructors may grant deferrals for midterm examinations for illness, accident, or family affliction, and students must provide appropriate documentation 48 hours after the midterm exam. The Department of Biochemistry and Microbiology considers it a breach of academic integrity for a student taking a deferred examination to discuss the exam with classmates. Similarly, students who reveal the contents of an examination to students taking a deferred examination are considered to be in violation of the University of Victoria policy on academic integrity (see current University Calendar). Deferral of a final exam must be requested with an Academic Concession form and submitted directly to Undergraduate Records. Deferred final exams for fall term courses will be arranged by the instructor. Deferred final exams for spring term courses will be arranged through Undergraduate Records and must be written before the end of the summer term as stipulated in the University Calendar.
5. Scan sheets for multiple choice exams (bubble sheets) will not be made available for review. Therefore, in addition to filling in answers on the scan sheet, students should also circle their answers in ink on their exam.
6. Professors may refuse to review/remark exams not written in ink. In addition, requests for review/remark of a midterm exam must be made within one week of the exam being returned. Students are expected to promptly pick up midterm exams after marking has been completed, either in class or from the instructor.
7. Examination papers that have pages removed, or are mutilated will not be marked.
