Course Content

A concentrated introduction to principles of economics, project management, and financial project evaluation and selection for Engineering students. Economics topics include supply and demand, multipliers and tax incidence. Financial project evaluation topics include discounted cash flow, benefit-cost analysis, financial accounting, and decision-making considering depreciation, inflation, taxes and risk. Project management topics include work breakdown structures, the critical path method and crashing. Assumes competency in calculus, algebra and familiarity with computer spreadsheet software.

midterm is expected to receive an N (incomplete and failed) grade. If a student misses both midterms for

Academic Integrity

Academic integrity requires commitment to the values of honesty, trust, fairness, respect, and responsibility. Students are expected to observe the same standards of scholarly integrity as their academic and professional counterparts. A student who is found to have engaged in unethical academic behaviour, including the practices described in the [Policy on Academic Integrity](#) in the University Calendar, is subject to penalty by the University.
